Australian/New Zealand Standard

Structural steel welding

Part 4: Welding of high strength quenched and tempered steels

Superseding AS/NZS 1554.4:2010
This joint Australian/New Zealand standard was prepared by joint Technical Committee WD-003, Welding of Structures. It was approved on behalf of the Council of Standards Australia on 24 September 2014 and by the Council of Standards New Zealand on 12 September 2014.

This standard was published on 25 November 2014.

The following are represented on Committee WD-003:
Australasian Corrosion Association
Australian Chamber of Commerce and Industry
Australian Industry Group
Australian Steel Institute
Austroads
Bureau of Steel Manufacturers of Australia
Energy Networks Association
Engineers Australia
New Zealand Heavy Engineering Research Association
New Zealand Non-Destructive Testing Association
Steel Reinforcement Institute of Australia
University of Sydney
Welding Technology Institute of Australia

Keeping standards up to date
Standards are living documents which reflect progress in science, technology, and systems. To maintain their currency, all standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current standard, which should include any amendments which may have been published since the standard was purchased.

Detailed information about joint Australian/New Zealand standards can be found by visiting the standards webshop in Australia at www.saiglobal.com or Standards New Zealand’s website at www.standards.govt.nz.

For more frequent listings or notification of revisions, amendments, and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national standards organisation.

We also welcome suggestions for improvement in our standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to either the Chief Executive of Standards Australia or the New Zealand Standards Executive at the address shown on the title page.

This standard was issued in draft form for comment as DR AS/NZS 1554.4.
PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee WD-003, Welding of Structures, to supersede AS/NZS 1554.4:2010.

This Standard incorporates Amendment No. 1 (September 2017). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.

The objective of this Standard is to provide rules for the welding of a wide range of steel constructions, using high strength quenched and tempered steel parent material.

The objective of this revision is to update the Standard and bring it in line with the latest edition of AS/NZS 1554.1, Structural steel welding, Part 1: Welding of steel structures.

This edition incorporates the following major changes to the 2010 edition:

(a) Revision of the following Clauses:
   1.1, 2.3.1, 2.3.3, 3.1.2 (new), 3.1.3, 4.1.1 (Note 2), 4.1.4, 4.2(b), 4.3.2 (new clause), 4.5.5.1, 4.6.1.1 (new sub clause), 4.7.1, 4.7.7, 4.12.1, 4.12.2.3, 5.1.1 (new note), 5.2.2, 7.2(a) (new), 6.2.2, 6.3.3, 6.4.3 (new), 6.7 (Note 2), 6.8 (new note), 7.2 (new), 7.4, F2.2, F4.

(b) Revision of the following Tables:
   4.1.3, 4.5.5.1 (Title and Note 2, 4.5.5.4 (Title), 4.6.1(A), 4.6.1(B), 4.6.2, 4.7.1 (Notes 1 and 3 revised), Table 4.11(A) Item (u) deleted, 4.11(D) (new), 4.12.2(B) (Note 1), 5.3.4, 6.2, E4 (items renumbered and revised).

(c) Revision of the following Figures:
   5.2.2 (new), 6.2(a) and (b).

The Standard requires that weld preparations, welding consumables and welding procedures be qualified before commencement of welding. Prequalified joint preparations, welding consumables and welding procedures are also given in the Standard.

The Standard, in catering for structures subject to fatigue conditions as well as statically loaded structures, provides three categories of welds with three differing levels of weld quality assurance associated with the different types of service to which the welds are subjected. The intention is that the designer should select the category suited to the severity of the service and nominate this on the drawings. Where a structure contains more than one category, this nomination of appropriate categories will ensure that appropriate levels of supervision and inspection will be applied to the relevant parts of the structure.

Statements expressed in mandatory terms in notes to tables and figures are deemed to be requirements of this Standard.

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the appendix to which they apply. A ‘normative’ appendix is an integral part of a Standard, whereas an ‘informative’ appendix is only for information and guidance.

BIBLIOGRAPHY ........................................................................................................... 106
1.1 SCOPE

This Standard specifies requirements for the welding of steel structures made up of combinations of steel plate, sheet or sections, including hollow sections and built-up sections, or castings and forgings, by the following processes:

(a) Manual metal-arc welding (MMAW).
(b) Submerged arc welding (SAW).
(c) Gas metal-arc welding (GMAW), including pulsed mode.
(d) Gas tungsten-arc welding (GTAW or TIG).
(e) Flux-cored arc welding (FCAW).
(f) Electroslag (including consumable guide) welding (ESW) (see Note).
(g) Electrogas welding (EGW) (see Note).

NOTE: These processes may not be suitable for welding quenched and tempered steels in all cases (see WTIA Technical Note 15).

This Standard is limited to the welding of quenched and tempered steel parent material complying with Clause 2.1.

This Standard applies to the welding of steelwork in structures complying with AS 4100 or NZS 3404.1. Where welded joints in these structures are governed by dynamic loading conditions, this Standard applies only to those welded joints that comply with the fatigue provisions of AS 3990, AS 4100 or NZS 3404.1, as limited by Item (ii) below, or with the directly equivalent fatigue provisions of other application Standards.

This Standard applies to welded joints that are—

(i) not subject to fatigue conditions; or

(ii) subject to fatigue conditions; and—

(A) the stress range in the welded joint complies with the permissible stress range of stress Categories C, D, E or F of AS 3990, or weld categories lower than or equal to detail Category 112 of AS 4100 or NZS 3404.1;

(B) the stress range in the welded joint is not greater than 80% of the permissible stress range of stress Category B of AS 3990 (Category SP weld, see Clause 1.5.2); or

(C) the stress range in the welded joint is greater than 80% of the permissible stress range for stress Category B of AS 3990, or exceeds the stress range permitted for detail Category 112 of AS 4100 or NZS 3404.1 (Category FP weld, see Clause 1.6), but does not exceed the maximum stress ranges permitted for these categories.
In addition to the abovementioned structures, the Standard applies to the welding of bridges, cranes, hoists, earthmoving equipment, other dynamically loaded structures and steelwork in applications other than structural.

NOTES:
1. Further information on this Standard is given in WTIA Technical Note 11.
2. This Standard requires that weld preparations, welding consumables and welding procedures be qualified before commencement of welding. Prequalified joint preparations, welding consumables and welding procedures are also given.
3. In catering for structures subject to fatigue conditions as well as statically loaded structures, this Standard provides three categories of welds with three differing levels of weld quality assurance associated with the different types of service to which the welds are subjected. The intention is for the designer to elect the category suited to the severity of the service and nominate this on the drawings. Where a structure contains more than one category, this will ensure that appropriate levels of supervision and inspection will be applied to the relevant parts of the structure.
4. GMAW includes waveform controlled welding such as synergic, programmable and microprocessor controlled processes e.g. pulsed spray transfer, controlled short circuit transfer.

1.2 EXCLUSIONS
This Standard does not apply to the welding of structures by the following processes:
(a) Oxy-fuel gas welding (GW).
(b) Resistance welding (RW).
(c) Friction welding (FW).
(d) Thermit welding (TW).

This Standard does not apply to the welding of pressure vessels and pressure piping, nor to underwater welding.

NOTE: For guidance on underwater welding the user should refer to ISO 15614-10, ISO 15618-1 and ISO 15618-2 as appropriate.

This Standard does not cover the design of welded connections and permissible stresses in welds, nor the production, rectification or repair of castings.

1.3 INNOVATION
Any alternative materials, welding processes, consumables, methods of construction or testing that give equivalent results to those specified, but do not comply with the specific requirements of this Standard or are not mentioned in it, are not necessarily prohibited.

1.4 NORMATIVE REFERENCES
Documents referred to for normative purposes are listed in Appendix A.

NOTE: Documents referenced for informative purposes are listed in the Bibliography.

1.5 DEFINITIONS
For the purpose of this Standard, the symbols and definitions given in AS 1101.3, AS 2812 and those below apply.

1.5.1 Fabricator
The person or organization responsible for the welding of the structure during fabrication or erection.
AS/NZS 1554.4:2014 Structural steel welding - Part 4: Welding of high strength quenched and tempered steels
